Ryan Li

(339) 215-9735 • ryanli08199@gmail.com • West Lafayette, IN

EDUCATION

Purdue University — Purdue Polytechnic Institute **Expected May 2030**
West Lafayette, IN • B.S. in Data Analytics Application and Technology

The Data Mine — Purdue Data Mine Learning Community **Ongoing**
- Learning SQL and data-processing fundamentals through hands-on project work with real-world datasets alongside faculty and industry partners

Lexington High School
Lexington, MA • GPA: 3.78 (unweighted — school does not offer weighted GPA) • Completed most rigorous course load available • SAT: 1530 (800 Math)

RESEARCH & DATA WORK

Aviation Flight-Data Preprocessing — Purdue Flight Simulators Ongoing
- Preprocessing and cleaning flight-simulation data exported from Purdue aviation flight simulators for use by a Bay Area company training an AI system designed to help student pilots learn to fly
- Structuring and validating simulator datasets to prepare them for downstream machine learning use

Liu, X.; Jin, N.; **Li, R.**; Li, K.; Wang, M. Y.; Yang, B. "ASABC: An LLM-based Arbitrator for Sentiment Analysis in Bullet Chat Messages." IEEE AIxHeart, 2024.
- Co-developed a few-shot prompt-tuning framework using a large language model to classify sentiment in live-streaming bullet chat messages, achieving ~80% accuracy across multiple validation scenarios

PROJECTS

Jersey & Player-Role Recognition — Computer Vision Project **High School**
- Built a CNN to identify player team affiliation from jersey colors/numbers in game film and fine-tuned a YOLOv1 model to classify on-screen individuals as players, referees, coaches, or others
- Tracked movement in vector form to support frame-by-frame play review
- Trained on human-labeled footage as ground truth, applying linear regression and iterative loss-function tuning to reach over 90% classification accuracy
- Awarded the Distinction Award at IEYI China (International Exhibition for Young Inventors)

Kaggle Titanic: Machine Learning from Disaster — Data Science Competition
- Built a machine learning model to predict passenger survival, achieving 100% accuracy on the public leaderboard (tied for 1st among 2,000+ entries)

EXPERIENCE

Storage Management Intern — Ventrix Supply **May 2026 – Jul 2026**
New England distributor of TCL air conditioning systems
- Performed daily inventory analysis at a single warehouse, tracking AC and heating unit stock and using exploratory data analysis to catch discrepancies and inform restocking decisions
- Coordinated with the sales department to confirm shipping orders and applied basic statistical analysis to inventory counts to support day-to-day operational decisions
- Gained working knowledge of government regulations and industry standards governing electronics and HVAC/heating systems

SKILLS

Programming: Python, C++, Java, R (basic)
Technical: Data Preprocessing & Pipeline Development, Machine Learning (CNN, YOLO), Computer Vision, Data Analysis, LLM Prompt-Tuning
